Diesel Engine

- Model: **QSB6.7-G31**
- Structure: Use forged steel camshaft and crankshaft, high-strength cylinder design, multiple parts cast on the cylinder, high rigidity, strong high-pressure resistance, good reliability, and longer service life;
- Integrated design: The cylinder block and cylinder head adopt integrated design to prevent water and oil leakage from the engine. occurrence, the parts are about 40% less than other similar engines, and the failure rate is greatly reduced;
- Advanced design and sophisticated manufacturing: adaptable to various harsh working conditions, strong in high-intensity and heavy-load operation capabilities;
- Fuel system: Three-stage fuel filtration ensures a balanced level of particle dispersion, protects the main components of the fuel system, and maximizes engine life;
- Lubrication system: The cylinder bore adopts a platform grid honing design, and the perfect geometric structure effectively prevents oil leakage. Advanced technologies such as new piston ring components and sealing gasket curling molding are used to reduce oil loss;
- The electronic control system can intelligently switch working modes according to the environment and operating conditions, and has self-diagnosis, alarm and remote monitoring functions;
- The engine may be operated at :
1500 RPM up to 2000 m and 104 ° F (40 ° C) without power deration.
For sustained operation above these conditions, derate by 4% per 300 m, and 3% per 10 ° C.
